

Free Program for SEAMEO School Network
from the University of Tsukuba, Affiliate Member of SEAMEO

**Teaching Mathematics to Develop Mathematical Thinking as Higher Order Thinking:
How do you teach? Why?**

Lesson 19: How to extend division with remainder

Isoda, Masami, Prof., Faculty of Human Sciences
Director of CRICED, The University of Tsukuba, Japan
With collaborations of
Nguyen Chi Thanh and Teh Kim Hong

Adopting a 21st Century Curriculum  Revitalizing Teacher Education

Mathematical Values, Attitudes and Habits for Human Character

Mathematical Values: Generosity and Expandability, Reasonableness and Harmony, Usefulness and Efficient, Simpler and Easier, Beautifulness

Mathematical Attitude attempting to: See and think mathematically, Pose question and develop explanation such as why and when, Generalize and extend, Appreciate others' idea and change representation to conceptualize

Habits of mind for Citizen to live: Reasonably and critically with respecting and appreciating others, Autonomously Creatively and innovatively in harmony, Judiciously using tools such as ICT, Empowerly in imagining the future through lifelong learning

Mathematical Thinking and Processes

Mathematical Ideas for: Set, Unit, Compare, Operate, Algorithm, Fundamental principle, and Varied representation such as table, diagram, expressions, graph and translations.

Mathematical Thinking: Generalization and Specialization, Extension and Integration, Inductive, Analogical and Deductive reasoning, Abstracting, Conceptualizing and Embodiment, Objectifying by representing and symbolizing, Relational and Functional thinking, Thinking forward and backward

Mathematical Activities for: Problem Solving, Exploration and Inquiry, Mathematical Modeling, Conjecturing, Justifying and Proving, Conceptualization and Proceduralization, Representation and Sharing

Content

- Numbers & Operations - Quantity & Measurement
- Extension of Number and Measurement
- Number & Algebra

Reflection

Acquisition

Review

Appreciations

HOTS is Math. T.

Those terminology distinguish tasks and explain task sequence for the preparation of future learning.

Mathematical Thinking

Curriculum Standards: SEABES-CCRLS (by SEAMEO-RECSAM (Mango, Ahmad, Isoda; 2017))

Review Using what you already knew on the past 18 lessons!

|--|--|---|
| TOPIC 1: INTRODUCTION | L1: Introductory discussion to develop mathematical thinking | |
| TOPIC 2: NUMBERS | L2: How to introduce number | L3: What is n |
| TOPIC 3: ADDITION AND SUBTRACTION | L4: How to introduce addition | L5: What is a |
| | L6: How to introduce subtraction | L7: What is s |
| TOPIC 4: EXTEND NUMBER TO 100 WITH ADDITION AND SUBTRACTION USING COLUMN FORM | L8: How to extend number to more than 10 | L9: How to extend addition |
| | L11: How to extend number to more than 100 | L12: How to introduce column addition |
| | | L13: How to introduce column subtraction |
| TOPIC 5: MULTIPLICATION | L14: How to introduce multiplication | L15: How to develop multiplication table |
| | L16: What is the multiplication table | L17: How to introduce column multiplication |
| TOPIC 6: DIVISION | L18: How to introduce division | L19: How to extend division with remainder |
| TOPIC 7: REFLECTIVE DISCUSSION | L20: Panel-Reflective discussion for summary | |

Participants of this program are able to imagine the ways of learning from the past process of learning.

Participants need to consider what new.

What is division with remainder?

Q1. Which situation do you use to teach remainder?:

Partitive Division situation
12 candies distribute 4 children equally. How many candies each child will receive.
 $12 \div 4 = 3$, **Ans. 3 candies for each child;** $4 \times 3 = 12$ in English
 $(3 \times 4 = 12$ in Japan)

Quotative Division situation
There is 12 candies and each child receive 4 candies equally. How many children will receive it.
 $12 \div 4 = 3$, **Ans. 3 children;** $3 \times 4 = 12$ in English
 $(4 \times 3 = 12$ in Japan)

Q2. Please answer $(-5) \div 3$
Have you ever discuss the remainder?

$(-5) \div 3 ? \dots$ Remainder is -2 or +1?

| | | | | | | | | | | | | | | | | |
|--------------------------------|---|---|---|---|---|---|---|---|---|---|----|----|----|----|----|----|
| | 9 | 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 | -1 | -2 | -3 | -4 | -5 | -6 |
| Answer for $\square \div 3$ | 3 | 2 | 2 | 2 | 1 | 1 | 0 | 0 | 0 | 0 | 0 | -1 | -1 | -1 | -2 | -2 |
| Remainder for $\square \div 3$ | 0 | 2 | 1 | 0 | 2 | 1 | 0 | 2 | 1 | 0 | -1 | -2 | 0 | -1 | -2 | 0 |

Less

Q2. Do you teach Less?

| | | | | | | | | | | | | | | | | |
|--------------------------------|---|---|---|---|---|---|---|---|---|----|----|----|----|----|----|----|
| | 9 | 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 | -1 | -2 | -3 | -4 | -5 | -6 |
| Answer for $\square \div 3$ | 3 | 2 | 2 | 2 | 1 | 1 | 0 | 0 | 0 | -1 | -1 | -1 | -2 | -2 | -2 | -2 |
| Remainder for $\square \div 3$ | 0 | 2 | 1 | 0 | 2 | 1 | 0 | 2 | 1 | 0 | 2 | 1 | 0 | 2 | 1 | 0 |

Remainder

Permanence of Form
 $A = B \times Q + r (r \geq 0)$

Given an integer $n > 1$, called a modulus, two integers are said to be congruent modulo n , if n is a divisor of their difference (i.e., if there is an integer k such that $a - b = kn$).
Congruence modulo n is denoted: $a \equiv b \pmod{n}$
For example: $1 \equiv -5 \pmod{3}$, i. e. $1 - (-5) = 2 \times 3$

Before Division with Remainder: Why we teach it?

Partitive vs Quotative situations
Integrate as one division operation

Permanence of Form

Proceduralization by
Compare division expressions in order

See division as multiplication

These are necessary to find the quotient.

Equivalent class of division

Introduction of Division with Remainder

Introduced by quotative division situation

Extend it to partitive division situations

Beautifulness of pattern by using remainder

11 Division with a Remainder

There are 24 apples and 8 baskets. How many apples are put in each bag?

24 ÷ 8 = 3

There are 24 apples and 8 baskets. How many apples are put in each bag?

24 ÷ 8 = 3

There are 24 apples and 8 baskets. How many apples are put in each bag?

24 ÷ 8 = 3

There are 24 apples and 8 baskets. How many apples are put in each bag?

24 ÷ 8 = 3

There are 24 apples and 8 baskets. How many apples are put in each bag?

24 ÷ 8 = 3

There are 24 apples and 8 baskets. How many apples are put in each bag?

24 ÷ 8 = 3

There are 24 apples and 8 baskets. How many apples are put in each bag?

24 ÷ 8 = 3

There are 24 apples and 8 baskets. How many apples are put in each bag?

24 ÷ 8 = 3

Think about how to calculate: Preparation for long division.

Thinking about How to Calculate

1. There are 8 boxes and 120 canned candies in each one. All 800 canned candies are divided equally among 8 children. How many will each child receive?

2. Write an equation.

3. Think about how to calculate the answer by using what you have learned.

4. Calculate 80 ÷ 8 using various ways.

5. Division with One-Digit Numbers

1. Division with One-Digit Numbers

2. Division with One-Digit Numbers

3. Division with One-Digit Numbers

4. Division with One-Digit Numbers

5. Division with One-Digit Numbers

6. Division with One-Digit Numbers

7. Division with One-Digit Numbers

8. Division with One-Digit Numbers

9. Division with One-Digit Numbers

10. Division with One-Digit Numbers

11. Division with One-Digit Numbers

12. Division with One-Digit Numbers

13. Division with One-Digit Numbers

14. Division with One-Digit Numbers

15. Division with One-Digit Numbers

16. Division with One-Digit Numbers

17. Division with One-Digit Numbers

18. Division with One-Digit Numbers

19. Division with One-Digit Numbers

20. Division with One-Digit Numbers
