

# Computational Thinking:

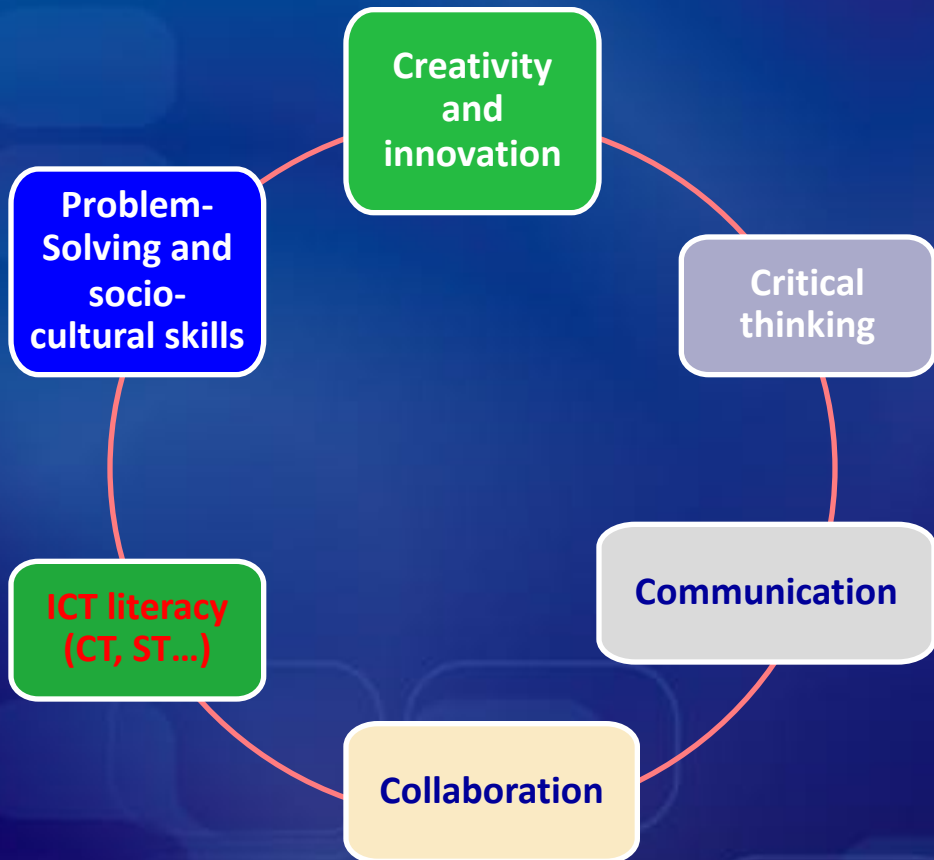

Concept and example in Vietnamese  
new curriculum

Assoc. Dr. Nguyen Chi Thanh  
University of Education  
Vietnam National University at Hanoi

# Plan

- Introduction
- What is computational thinking (CT), Algorithmic thinking (AT); Relation with MT
- CT&AT in VN actual curriculum
- CT&AT in VN new curriculum
- Examples

# Commonly identified 21<sup>st</sup> Century Skills

Seymour Papert (29/2/1928 – 31/7/2016)  
Computational thinking and LOGO language

# COMPUTATIONAL THINKING

## DECOMPOSITION

Breaking big problems into smaller, easier to manage problems

## PATTERN RECOGNITION

Analyze & look for a repeating sequence

Remove parts of a problem that are unnecessary and make one solution work for multiple problems  
**ABSTRACTION**

Step-by-Step instructions on how to do something  
**ALGORITHM DESIGN**

# What is Computational Thinking (CT)?

CT is a **problem-solving process** that includes (but is not limited to) the following characteristics:

- **Formulating problems** in a way that enables us to use a computer and other tools to help solve them.
- **Logically organizing and analyzing data**
- **Representing data through abstraction** such as models and simulations
- **Automating solutions through algorithmic thinking** (a series of ordered steps)
- **Identifying, analyzing, and implementing possible solutions** with the goal of achieving the most efficient and effective combination of steps and resources
- **Generalizing and transferring this problem solving process** to a wide variety of problems

# CT is

- the thought processes involved in formulating problems and their solutions so that the solutions are represented in a form that can be effectively carried out by an information-processing agent.”
- “The solutions can be carried out by a human or machine, or more generally, by combinations of humans and machines.”

**Prof. Jannette M. Wing**  
Corporate vice president of Microsoft research

# Something to consider

The type of thinking required by citizens for successful participation in a society is related to the raw products available and the production processes being used to solve problems.

# Beyond Information Technology

- Knowing about data and ideas and using/combining these resources to solve problems.
- Move students beyond using tools and information to **creating** tools and information
- The raw materials require thought processes about manipulating data, using abstractions, **computational thinking**.

# Tower of Hanoi

- Tower of Hanoi is a mathematical puzzle invented by a French Mathematician Edouard Lucas in 1883.
- The game starts by having few discs stacked in increasing order of size. The number of discs can vary, but there are only three pegs.

# What is Computational Thinking?

- Asking: How difficult is the problem?
- Asking: How can it be solved?
- Asking: How can technology be applied to the problem?
- Asking: What computational strategies might be employed?
- Asking: What is the power and limit of human and computer intelligence?

# Why is it important?

- It moves students beyond technology literacy
- It creates problem solvers instead of software technicians
- It emphasizes creating knowledge rather than using information
- It presents endless possibilities for creatively solving problems
- It enhances the problem-solving techniques you already teach

# What is happening in the World?

“Computational” has become part of

- Math and statistics
- Every Science
  - Biology
  - Physics
  - Chemistry
  - Nanotechnology ...
- Economics
- Arts and recreation
- Engineering and design ...

# Algorithmic thinking

- Algorithmic thinking occurs when someone observes repeated patterns in problems and then generalizes a set of rules for dealing with such situations (so that one need not think this through anew each time that problem occurs). (Roberto, 2020)

## Computational Thinking

- Simulation
- Data mining
- Networking
- Automated data collection
- Gaming
- Algorithmic reasoning
- Robotics
- Programming

## Mathematical Thinking

- Problem solving
- Modeling
- Data analysis & interpretation
- Statistics & probability

- Counting
- Arithmetic
- Algebra
- Geometry
- Calculus
- Set theory
- Topology

# Computational Thinking Concepts

- Algorithm—the kingpin term
- Data—variables, data bases, Queue
- Abstraction—conceptualizing, modularizing
- Query—search, conditionals, Boolean
- Sensing & Feedback—robotics
- Iterations—loops, recursion
- Systems

# Curriculum reforms in Vietnam since the 1945-the independent era up to now

1946

1946 reform: Hoang Xuan Han curriculum

---

- This has been influenced by French curriculum

Since 1950

1950 reform: influenced by Russian curriculum

---

Since 1980

1980 reform: 1 program; 3 maths textbooks

---

Since 2003

2000 reform: 1 program; 1 textbooks **Actual curriculum**

Since 2015

2018 reform: 1 program; several textbooks

# Characteristics of the new curriculum

## 5 core values

**1) Patriotism**

**2) Compassion**

**3) Hard work**

**4) Honesty**

**5) Responsibilities**

To develop  
student's  
competencies  
and values

# Characteristics of the new curriculum

## Competencies

### 10 core competencies

#### Common competencies

- Self autonomous
- Collaboration and communication
- Problem solving and creativities

#### Specifics competencies

- 1) Language
- 2) Calculation
- 3) Understanding on Nature and Society
- 4) Technology
- 5) Informatic
- 6) Esthetic
- 7) Health

Special competencies for gifted students

To develop student's competencies and values

# Introduction: 2018 education reform

- Comprehensive and radical educational reform
- New curriculum
- Implementation Schedule

**Grade 1: 2020-2021; Grade 6: 2021-2022; Grade 10: 2022-2023 and so on**

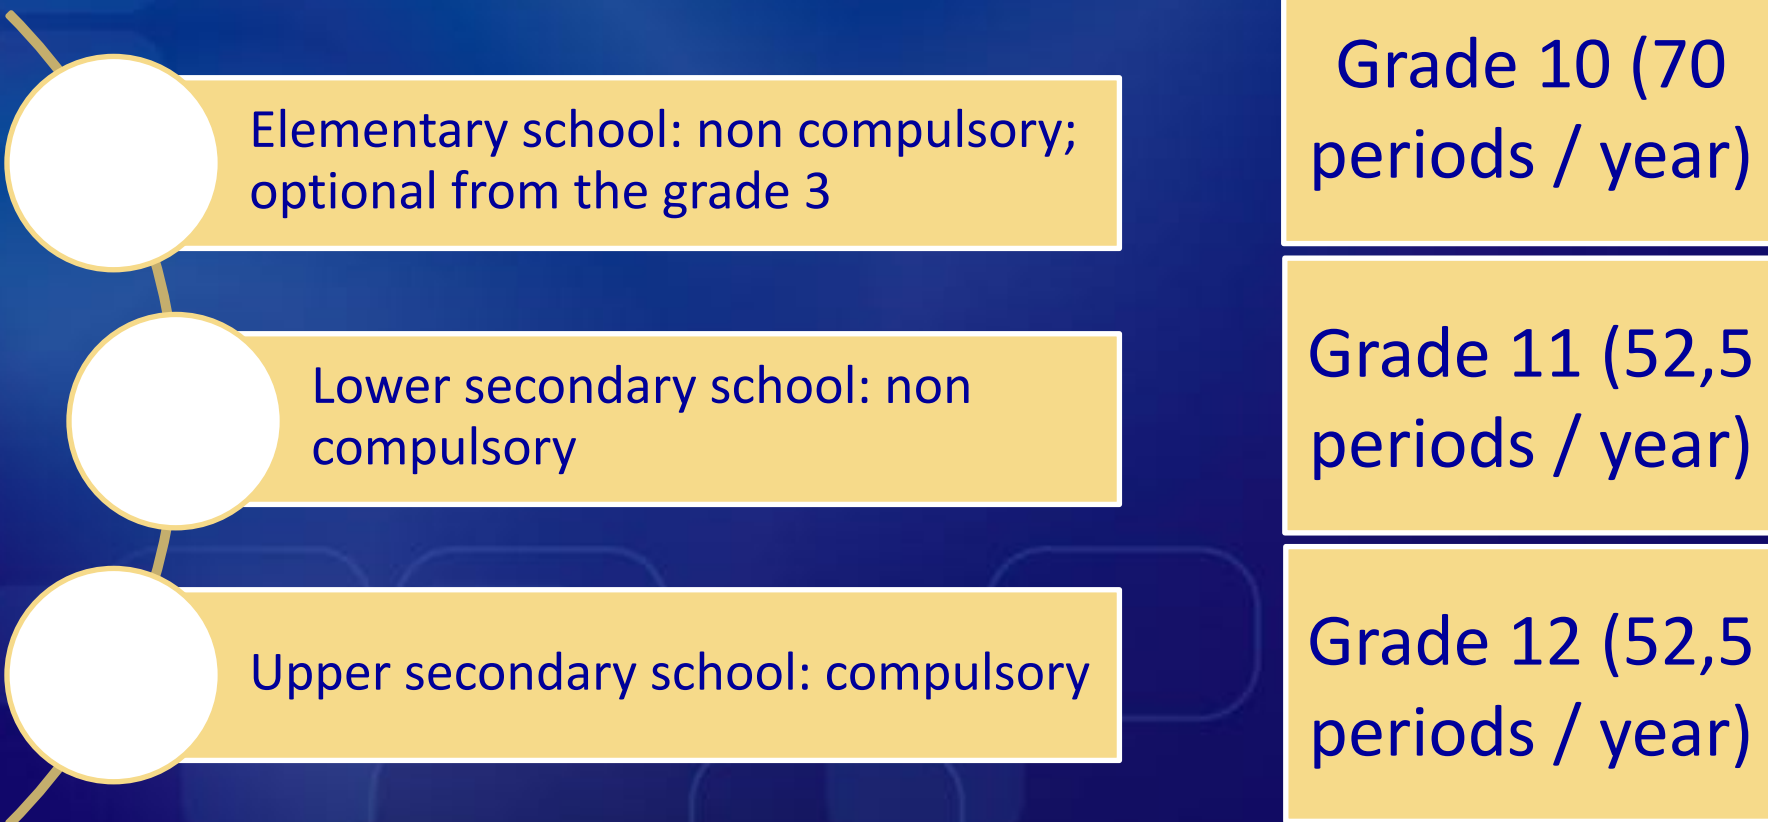

The new curriculum is expected to develop the skills of students and bring out their creative sides; to have more out-of-school and creative experience, rather than only theory.

The new curriculum will include compulsory practical activities for pupils to experience. Activities for primary schools will focus on developing their life skills, soft skills, relationships with friends, teachers and family.

Meanwhile, secondary education will focus on activities for social and community services and job-oriented activities.

# Informatics: Actual curriculum

Elementary school: non compulsory;  
optional from the grade 3

Lower secondary school: non  
compulsory

Upper secondary school: compulsory

Grade 10 (70  
periods / year)

Grade 11 (52,5  
periods / year)

Grade 12 (52,5  
periods / year)

# Informatics: Actual curriculum

Grade 10  
Generalities +  
computer  
architecture +  
Office: word

Grade 11  
Programing:  
Pascal  
language

Grade 12  
Office: ppt,  
excel; Internet

# In the new informatic curriculum: 12/2018

- Computer thinking: The process of identifying computational aspects in the world around us, thereby helping to solve the problem, such as knowing how to divide the problem into manageable parts and to give algorithms to solve them. Computer thinking is a basic and necessary skill for everyone, not just for computer scientists. Computer thinking is a cognitive and logical reasoning process to solve the problem, which is the ability to:

- + Decomposition of work and data
- + The generalization, identification and usage of patterns
- + Abstraction, choice of representation
- + Conditions for evaluation and estimation
- + Algorithm design

Computer thinking not only allows students to access computer topics but more importantly, it develops students' thinking skills to solve problems in learning and life.

# Informatics: New curriculum

Grades 3, 4, 5: 35 periods/year

Grades 6, 7, 8, 9: 35 periods / year

Grades 10, 11, 12: 70 periods/year

Detail: Generalities, Topics, Teaching method, Assessment of the new curriculum

# Informatics: New curriculum

Questions	Explanation
1. What are the changes in the curriculum objectives?	<p><b>1. General objectives of the all 3 educational levels</b></p> <ul style="list-style-type: none"> <li>- Contribute to the formation and development of all five core qualities, three general competences, and seven professional competences, <u>in particular the informatics competence identified in the General Curriculum.</u></li> <li>- Assists in the formation and development of all students in informatics competence including <b>5 groups of competency components:</b> <ul style="list-style-type: none"> <li>- Competence <u>a</u>: <i>Use and management of tools, means, automation systems of IT and ICT.</i></li> <li>- Competence <u>b</u>: <i>Knowledge and behavior in accordance with ethical, cultural and legal standards in the information society and knowledge economy.</i></li> <li>- Competence <u>c</u>: <i>Detect and solve problems with the support of digital technology.</i></li> <li>- Competence <u>d</u>: <i>Learning, self-learning with the support of IT and ICT systems.</i></li> <li>- Competence <u>e</u>: <i>Communication, integration, cooperation in accordance with the era of knowledge economy.</i></li> </ul> </li> </ul> <p>Informatic Subject equips students with a common computer knowledge system consisting of three integrated strands:</p> <ul style="list-style-type: none"> <li>- Computer Science (CS)</li> <li>- Information and Communication Technology (ICT)</li> <li>- Digital Literacy (DL)</li> </ul>

# Informatics: New curriculum

Primary education level	LSE level	USE level
<p>Topic C. Store, search and exchange information</p> <ul style="list-style-type: none"> <li>• Arrange to make it easy to find</li> <li>• Search for information in problem solving</li> </ul> <p>Topic F. Problem solving with the help of a computer.</p> <ul style="list-style-type: none"> <li>• Do the work according to the steps</li> <li>• Your tasks and computer help</li> <li>• Get familiar with the visual programming environment</li> <li>• Play and explore in <u>an</u> visual programming environment</li> </ul>	<p>Topic C. Store, search and exchange information</p> <ul style="list-style-type: none"> <li>• Social networking and some popular information exchange channels on the Internet</li> <li>• Characteristics of information in the digital environment</li> <li>• Information with problem solving</li> <li>• Evaluate the quality of information in problem solving</li> </ul> <p>Topic D. Ethics, law and culture in digital environments</p> <ul style="list-style-type: none"> <li>• Preventing some harm</li> </ul>	<p>Topic A. Computer and knowledge society</p> <ul style="list-style-type: none"> <li>• Introduction to Artificial Intelligence</li> <li>• Digital devices world</li> <li>• ICT Practice connecting digital devices</li> </ul> <p>Topic B. # So what happen in classroom?

- Computer science/technology
- Math
- Science
- Social studies
- Language arts
- Fine arts
- ...

# Some real examples

- Analyzing data
- Simulations
- Modeling
- Data manipulation
- Digital manipulatives & illustrators

# Some examples

CT Concept, Capability	CS	Math	Science
Data collection	Find a data source for a problem area	Find a data source for a problem area, for example, flipping coins or throwing dice	Collect data from an experiment
Data analysis	Write a program to do basic statistical calculations on a set of data	Count occurrences of flips, dice throws and analyzing results	Analyze data from an experiment
Data representation	Use data structures such as array, linked list, stack, queue, graph, hash table, etc.	Use histogram, pie chart, bar chart to represent data; use sets, lists, graphs, etc. To contain data	Summarize data from an experiment
Problem Decomposition	Define objects and methods; define main and functions	Apply order of operations in an expression	Do a species classification
Abstraction	Use procedures to encapsulate a set of often repeated commands that perform a function; use conditionals, loops, recursion, etc.	Use variables in algebra; identify essential facts in a word problem; study functions in algebra compared to functions in programming; Use iteration to solve word problems	Build a model of a physical entity
Algorithms & procedures	Study classic algorithms; implement an algorithm for a problem area	Do long division, factoring; do carries in addition or subtraction	Do an experimental procedure
Automation		Use tools such as: geometer sketch pad; star logo; python code snippets	Use probeware
Parallelization	Threading, pipelining, dividing up data or task in such a way to be processed in parallel	Solve linear systems; do matrix multiplication	Simultaneously run experiments with different parameters
Simulation	Algorithm animation, parameter sweeping	Graph a function in a Cartesian plane and modify values of the variables	Simulate movement of the solar system

# Examples in mathematics

- Geometrical constructions
- Solve quadratic equations
- Solve approximatively equations
- Calculate values of functions in specific interval with given distance between 2 consecutive values
- ...

# Examples

# Examples

Computational Thinking Concept	Subject Area Application
Break a problem into parts or steps	<b>Literature:</b> Break down the analysis of a poem into analysis of meter, rhyme, imagery, structure, tone, diction, and meaning.
Recognize and find patterns or trends	<b>Economics:</b> Find cycle patterns in the rise and drop of the country's economy.
Develop instructions to solve a problem or steps for a task	<b>Culinary Arts:</b> Write a recipe for others to use.
Generalize patterns and trends into rules, principles, or insights	<b>Mathematics:</b> Figure out the rules for factoring 2nd-order polynomials
	<b>Chemistry:</b> Determine the rules for chemical bonding and interactions.

Feb-20

**Thank you**

# Concepts useful for teaching

- Add to your own ICT knowledge.
- Help students to learn uses of ICT to represent and help solve problems within the various disciplines.
- Help students gain some underlying and/or introductory knowledge of computer science.
- Use terms associated with computing in everyday activities.
- Ask lots of ICT questions; encourage students to ask lots of questions and plan strategies to solve them.

# What it's not...

- It's not just more technical details for using software
- It's not thinking like a computer
- It's not programming (necessarily)
- It doesn't always require a computer
- It's not yet one more thing to add to your curriculum

# How is it different from other learning strategies?

- Not just procedural
- Not just constructionist
- Not just integrated
